API solutions

Automate your risk analysis and risk management applications

Our Country Risk API and Industry Risk API allow clients to integrate our Country Risk Data and Industry Risk Dataset with procurement platforms, supply chain risk management tools and investment strategies across multiple asset classes, as well as in-house systems to automate workflows, simplify risk assessment and identify risk in your investments.

Our APIs have been developed to provide you with a simple and easy solution, allowing data sharing and integration from our Global Risk Dashboard (GRiD) into your systems and tools.

Integrating with us is easy...

Using our APIs, you can:

✓ Integrate our data directly into the platform of your choice via our fully hosted RESTful API

✓ Allow non-technical users to shape API integrations by using our GRiD interface to make changes that are then reflected in our APIs

✓ Access our latest data with full automation

✓ Upload locations directly into GRiD using lat/long, postcodes or city names to analyse site specific risk data

Key features:

Country Risk API:

Access our Country Risk Data, covering 190+ ESG issues for 198 countries, 35% of issues measured to subnational levels

Bulk Scoring service:
- Scores sites with location coordinates
- Enables you to score thousands of sites to access indices on a granular level

Industry Risk API:

Access our Industry Risk Dataset, covering 51 ESG issues and 80 industries for 198 countries, 72% of issues measured to subnational levels
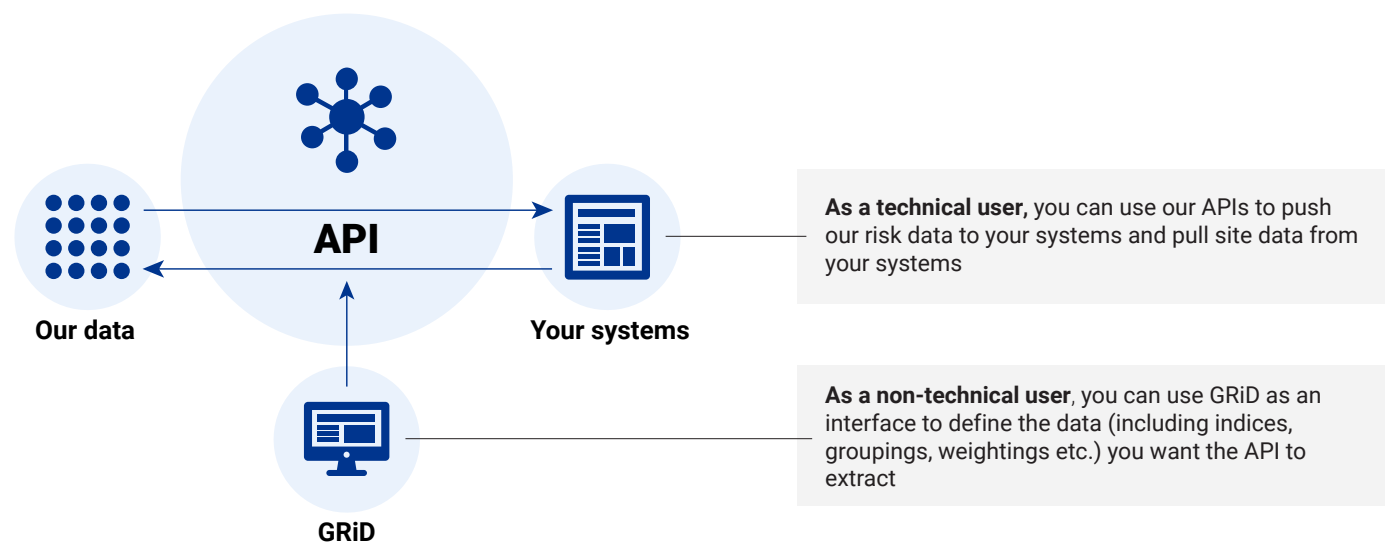

Site Scoring service:
- Interrogate our subnational Country Risk Data sector-by-sector
- Score sites with either country codes or location coordinates
- Built to scale so you can score thousands of sites at a time

Why use our APIs?

Connect with the world's most powerful global risk data

Save time and reduce manual effort

Accelerate internal processes through automation

Integrate world-leading risk data with your own models

Reveal new insight to make better, data-led decisions

Communicate risk more effectively across your organisation

How does it work?

Our data

API

Your systems

GRiD

As a technical user, you can use our APIs to push our risk data to your systems and pull site data from your systems

As a non-technical user, you can use GRiD as an interface to define the data (including indices, groupings, weightings etc.) you want the API to extract

About Verisk Maplecroft

Verisk Maplecroft is a leader in global risk and resilience analytics and advisory. Through a unique combination of proprietary risk data, predictive analytics and expert insight, our mission is to help multinational organisations navigate the complexities of an increasingly dynamic and interconnected risk landscape. We are part of Verisk, a leading specialist data analytics and insights provider.
